

ALEENA BIJU

Full Stack Developer | Java | Python | React

aleenab2005@gmail.com | 7902820227 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on internship experience building secure, scalable web applications across Java/Spring Boot, Python/Flask, and React/TypeScript. Proficient in REST API development and integration, JWT-based authentication, RBAC, SQL databases, and Git. Built full-stack applications spanning workflow automation, task management, role-based systems, and URL risk analysis. Strong backend foundation with experience taking features end-to-end from API and database design to frontend integration.

EDUCATION

Bachelor of Business Administration in Computer Application

MIT Arts, Commerce, Science College | 2023 – 2026 | CGPA: 8.32

Senior Secondary (XII), Maharashtra State Board of Secondary and Higher Secondary Education

Loyola High School and Junior College | 2023 | Percentage: 54.33%

Secondary (X), Maharashtra State Board of Secondary and Higher Secondary Education

St. Felix High School and Junior College | 2021 | Percentage: 76%

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, C++

Backend: Spring Boot, Spring Security, Flask, FastAPI, Hibernate, Microservices, REST APIs

Frontend: React.js, HTML5, CSS3

Databases: PostgreSQL, MySQL, MongoDB

Web & Data Extraction: Web Scraping, BeautifulSoup, Requests

Auth & Tools: JWT, RBAC, Swagger, Postman, Axios, Git, Maven, GitHub Actions (CI/CD)

Design: OOP, MVC, Repository, Singleton Patterns, Agile

EXPERIENCE

Java Full Stack Developer Intern

March 2026 – June 2026

StarCentauri Technologies Pvt Ltd

- Developed and integrated **5+ REST APIs** using **Java 17** and **Spring Boot** with JWT-based authentication and role-level authorization, enabling secure, stateless backend access control
- Implemented **RBAC (Role-Based Access Control)** at the API layer using Spring Security, applying OOP principles and the Repository design pattern to maintain clean, maintainable service architecture
- Designed and managed **PostgreSQL** schemas, writing optimized queries for CRUD operations, improving data retrieval performance through proper indexing and relationship management
- Debugged backend issues across controller/service/repository layers and validated REST endpoints with Postman

PROJECTS

OnboardX - IT Onboarding Automation Portal

Java 17 · Spring Boot · React.js · PostgreSQL

[GitHub](#)

- Developed a full-stack IT Onboarding Automation Portal using Java 17, Spring Boot, React.js, PostgreSQL to automate employee onboarding and IT asset management.
- Implemented **JWT-based authentication** and **Role-Based Access Control (RBAC)** for Admin, HR, Manager, IT Support, and Employee with secure REST APIs using Spring Security.
- Built modules for **Employee Management, Onboarding Workflow, Dashboard Analytics, and Asset Allocation**, including CRUD operations, approval workflows, and role-specific dashboards.

Taskly – Task Management System

React · TypeScript · Java 17 · Spring Boot · REST APIs · Git

[GitHub](#)

- Built a full-stack task management application with a React/TypeScript frontend and Spring Boot backend connected through REST APIs.
- Developed task CRUD operations with status tracking (To-Do / In Progress / Done) and priority management.
- Implemented JWT authentication and Axios-based frontend-backend communication with error handling and session management.

WebGuard — AI-Assisted URL Risk Analyzer *React · Python · Flask · MySQL · Ollama*

[GitHub](#)

- Developed a full-stack URL risk analysis platform using React and TypeScript and Flask REST APIs to identify potential risk indicators in publicly accessible webpages.
- Implemented **web scraping** and data extraction using **Requests** and **BeautifulSoup** to analyze webpage metadata, forms, links, scripts, images, and password fields.
- Built an explainable rule-based risk scoring engine with Low, Medium, and High risk levels, and implemented JWT authentication with user-specific analysis history using MySQL.
- Integrated **Ollama/TinyLlama** as an **AI explanation layer** to generate concise, human-readable explanations of detected risk signals without replacing the deterministic risk-scoring logic.

Role-Based Task Management System *Python · FastAPI · React.js · JWT · Axios*

[GitHub](#)

- Built a secure full-stack web application using FastAPI and React with JWT-based authentication and authorization.
- Implemented role-based access control (RBAC), restricting task operations based on user roles and ownership.
- Developed protected REST APIs for task CRUD operations using FastAPI dependencies and token validation.
- Integrated frontend with backend using Axios interceptors to manage tokens and handle session expiration gracefully.
